

How to Add Photos and Your Company Logo to Your NTA Profile

You can now make your NTA member profile a little more eye-catching and show off your destination, attraction or recent tours. Below are the simple steps you can follow to upload your company logo and photos to your profile.

To get started, first log in using your e-mail address and password. The Member Log In box is the blue box that appears in the middle of the NTAOnline.com homepage or on the right-hand side of any interior page.

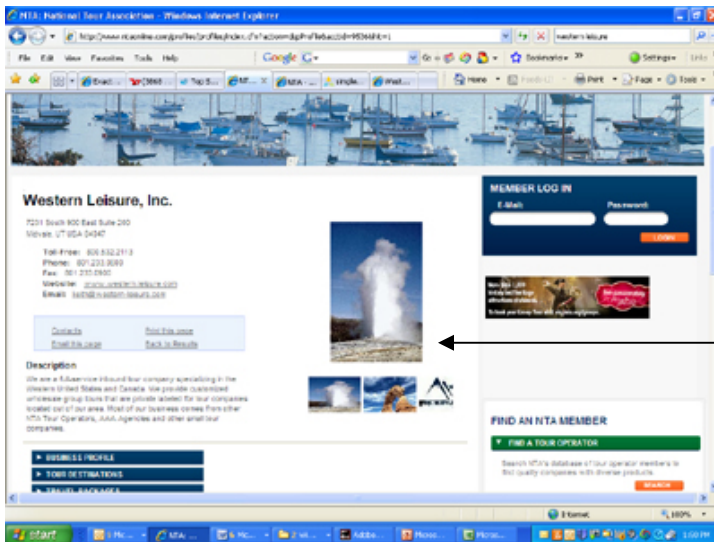

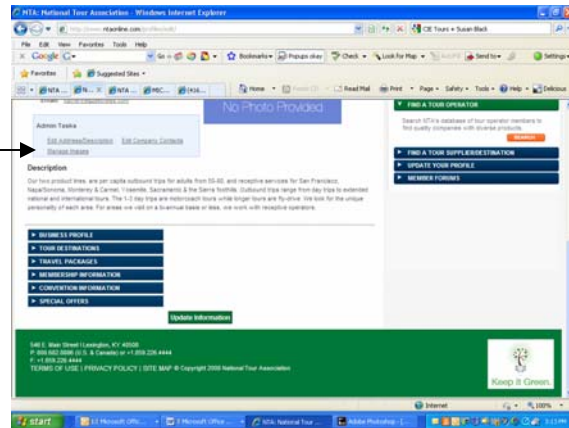

Next, select "Update Your Profile" from the right-hand side of the page as seen below.

Select "Manage Images" in the light blue box.

From here, you can follow the directions to add photos. The images can be .gif or .jpeg files and should be RGB files, not CMYK.

The system will automatically size your image to fit; however, the ideal size is 226 pixels wide by 175 pixels high.

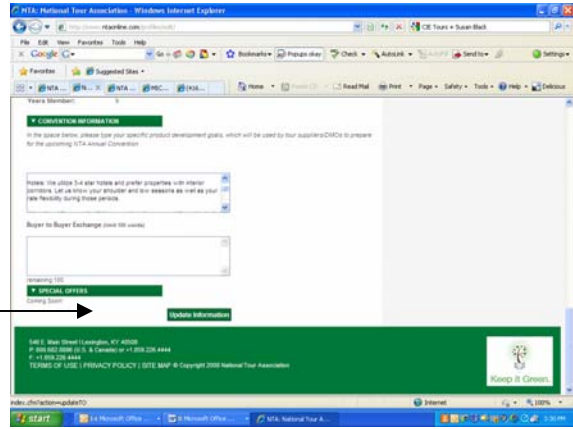

Also, it is usually best to make sure the file is below 300 DPI.

If you would like for your company logo to appear in both search results and on your profile, you should upload it twice. Save it once as a logo and once as an image.

When you are done, be sure to select the green button at the bottom that says “Update Information.”

Please contact your [Member Services Department](#) if you need assistance.
