

How to use the NTA Online Member Searches

As an NTA member, you have access to up-to-date member information that non-members cannot have. NTA's member searches give you access to details you need to grow your business and can save you an incredible amount of time and resources. The searches enable you to quickly research and contact thousands of business partners with a few clicks of the mouse, as well as ensuring that you're doing business with an NTA member.

To begin, simply select either "Tour Operator Search" or "DMO/Tour Supplier Search" on the right-hand side of NTA Online. You will need to log in first using your e-mail address and password.

Find a Tour Operator — The Tour Operator Search allows you to find basic company information for NTA tour operator members. You can search the database of NTA tour operators based on the criteria you select, such as destination, location, company name, company contact and the types of packages offered. You also can search by other options including types of transportation components, customers served, and if they offer customized or scheduled packages.

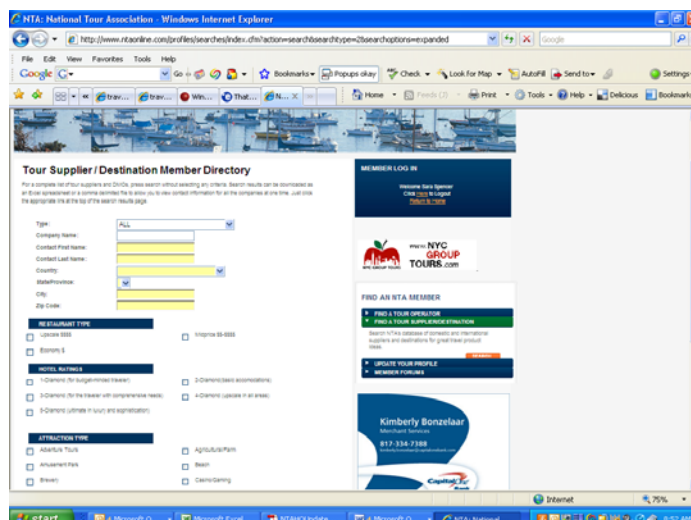

For example, if you want to find a tour operator that packages adventure trips to Reno and stays at a moderately-priced hotel, the NTA member searches make it happen.

Find a DMO/Tour Supplier — This search also allows you to search by basic company information. In addition, you can search by amenities, hotel ratings and attraction categories.

NTA also provides a radius search option that is unmatched by any other association. It allows tour operators to better develop product by searching for members based on their

travel routes and suppliers and DMOs can easily search for qualified tour operators coming to their area.

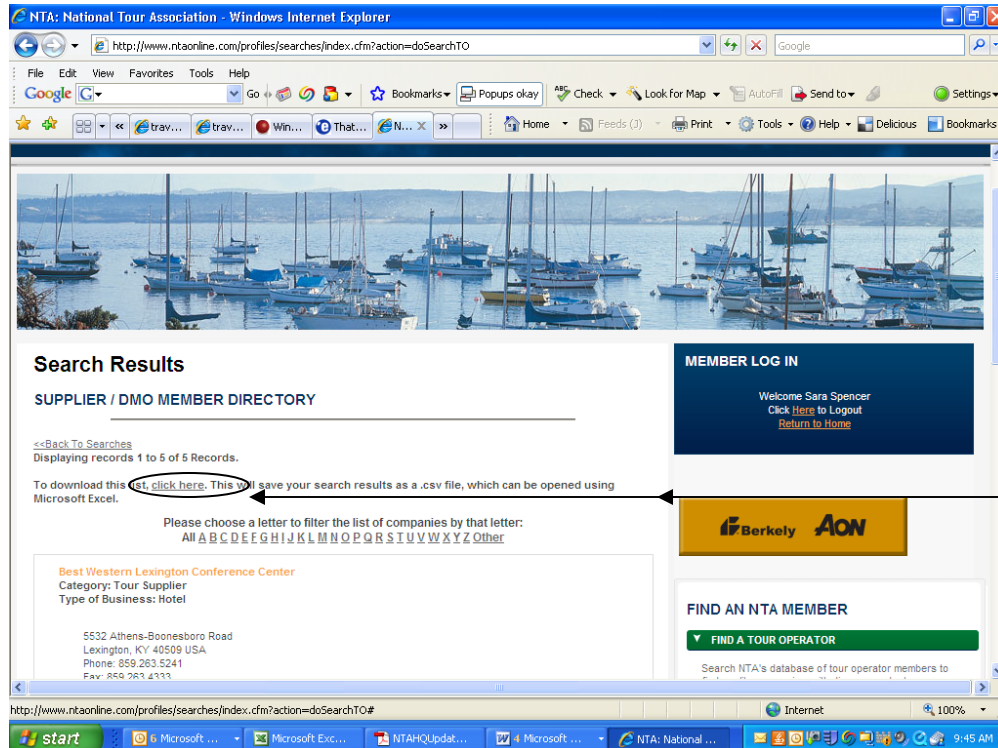

Once you've entered the zip code into the search field, you can search for partners within five, 10, 30, 50 and 100 miles of a destination. This is a huge advantage to tour suppliers and destinations representing

properties in suburban areas, since tour operators now have a better way to find NTA partners in surrounding cities and towns.

For example, if a tour operator is searching for a hotel in Reno, the search will not only return hotel properties in the city but will return properties in the surrounding areas. The search will include corporate headquarters locations as well as property locations.

Once you have your search results from either the tour operator or tour supplier and DMO search, you can easily download them into an Excel database that you can save for your own use and incorporate into your own sales tools.
